

2024 Summer Institute in Survey Research Techniques

Data Collection Using
Wearables, Sensors, and Apps in
the Social, Behavioral, and
Health Sciences

July 9-30, 2024
Tuesdays

The recent proliferation of mobile technology allows researchers to collect objective health and behavioral data at increased intervals, in real time, and may also reduce participant burden. In this course, we will provide examples of the utility of and integration of wearables, sensors, and apps in research settings. Examples will include the use of wearable health devices to measure activity, apps for ecological momentary assessment, and smartphone sensors to measure sound and movement, among others.
