Adding Modes without Subtracting Quality: Survey Data Collection in Low and Middle-income Countries

The growth of mobile phones and internet connection in low and middle-income countries (LMIC) may mean that survey data collection in LMIC can advance from face-to-face surveys to additional modes such as web or cell phone surveys. During this seminar, you will learn which modes are feasible in which contexts with a particular focus on mobile phone surveys.

Dr. Abigail (Abba) Greenleaf is an Assistant Professor at Columbia's Mailman School of Public Health. She received her PhD from Johns Hopkins Bloomberg School of Public Health, her Master of Public Health from Columbia and BS in public health from George Washington University. She is a public health demographer whose research focuses on (1) women's reproductive health across geographies and the lifespan and; (2) intensive longitudinal data collection. By integrating these areas, she is creating innovative findings for international sexual and reproductive health population sciences. She enjoys leveraging innovative data collection approaches to generate high-frequency, cost- efficient population data for public health action. Survey research has been a part of her research portfolio since she was a Doctoral student and wrote her dissertation about the feasibility of mobile phone surveys to create population-based estimates in Burkina Faso, West Africa. Her grandfather worked for Central Surveys, a survey research firm in Southwest Iowa that closed in 2017 after 80 years.
